Previously manual welding.

This time to re-create a master, made a total of six, there are three remaining. The installation method is as follows.

Step 1: Remove the screws on the back of the G80-9009, surrounded by the middle and the middle one. A few pieces of that square can not twist.

Step 4: the link to replace the master put up, the previous pin corresponding to the host above the hole, slowly installed, do not bend the original needle. After loading into the card is also relatively tight, if you want to fix a little more fixed, you can PCB on the J4 and J5 marked square pad to welding.

Step 5: the original two pin re-plug back to the new master, the bottom of the keyboard cable need to re-fold the original bend. In addition, when inserted do not crooked. Make sure that all the pins are inserted into the corresponding holes. USB, then use the miniUSB line, you can use a long line, you can also use an extension line.
